Meet the Amur Leopard!

Critically Endangered

Facts • Colour • Activities

Amur Leopard Fact File ■

Scientific name:	Panthera pardus orientalis
Status:	Critically Endangered
Where they live:	Russian Far East; northeast China
Habitat:	Temperate broadleaf and mixed forests of the Russian Far East
Diet:	Carnivore — deer, wild boar, hares, badgers
Weight:	25–48 kg
Lifespan:	10–15 years in the wild
Population:	Around 100 in the wild (up from just 30 in the early 2000s)

Amazing Facts ■

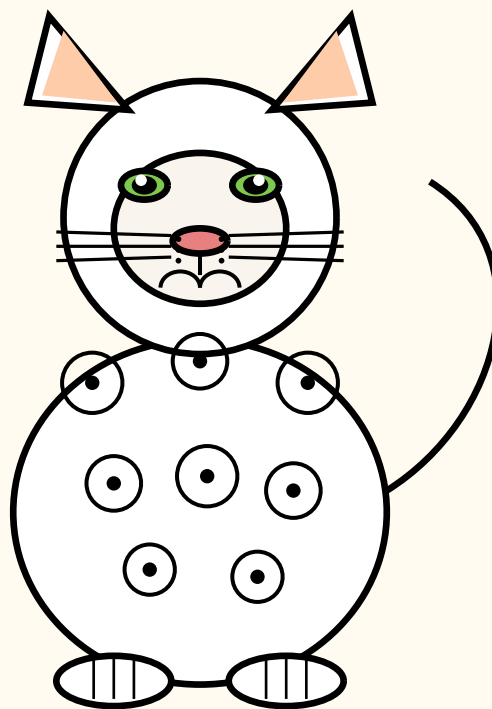

- The Amur leopard is the world's rarest wild cat — only around 100 survive in the wild.
- They can sprint at 60 km/h and leap more than 6 metres horizontally to catch prey.
- Their fur is thicker and paler than other leopards to survive freezing Russian winters.
- A male's territory can cover up to 500 km² — roughly the size of a small city.
- They drag prey up into trees to keep it away from tigers and bears.
- Since Land of the Leopard National Park was created in 2012, numbers have nearly tripled!

Threats ■■

#	Threat	Impact
1	Habitat loss and forest fragmentation	CRITICAL
2	Poaching for fur and bones	HIGH
3	Depletion of prey animals	HIGH
4	Inbreeding due to tiny population size	MODERATE

Colour Me! — Amur Leopard

Amur leopards have pale cream-yellow fur with large, hollow rosette spots outlined in black.
